Vision artificielle neuromimétique et localisation de cible visuelle

ALBIGES Pierre (M2 NIC)

Superviseurs:

DAUCE Emmanuel (INS) - PERRINET Laurent (INT)

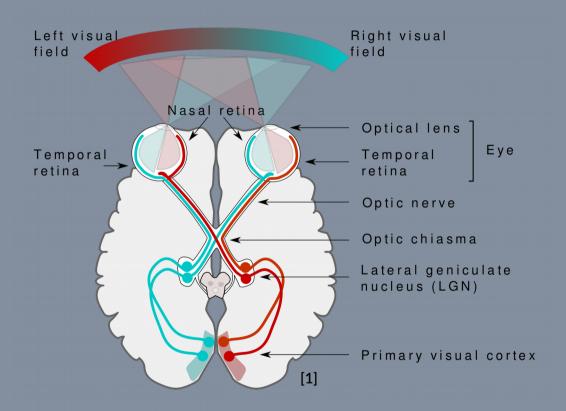

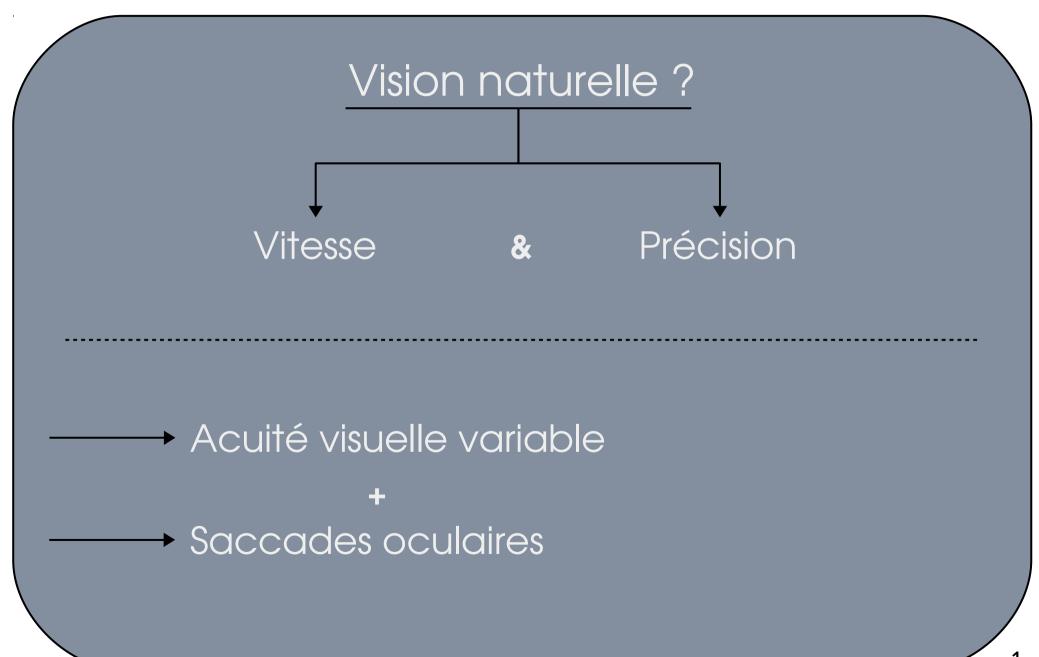

Vision

Vision naturelle?

Appréhender à la fois rapidement et avec précision notre environnement

Vision

Vision

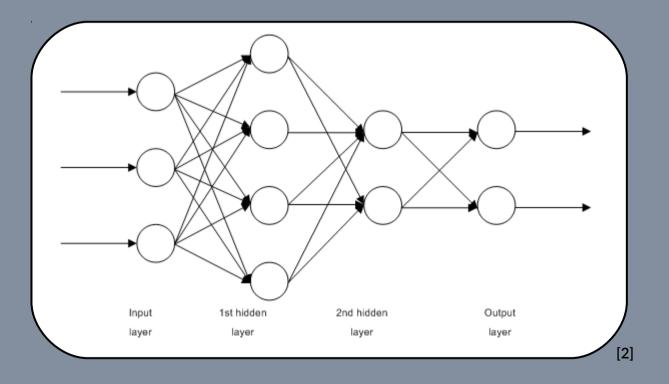

Vision artificielle?

Permettre à des agents artificiels de • percevoir, analyser et appréhender des images et des vidéos

Vision artificielle neuromimétique?

Créer un modèle de vision artificielle s'inspirant de l'acuité variable et des saccades oculaires biologiques pour percevoir et décrire son envionnement

Machine learning?
